

Automata

languages lexers, parsers, interpreters

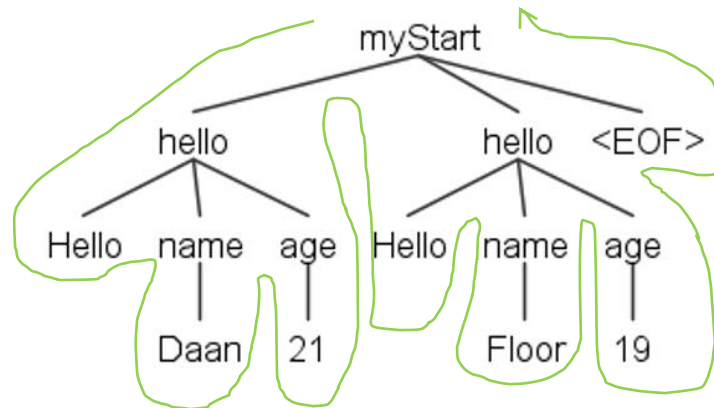

Listeners

- We are going to talk about the two ways to handle the result of parsing: listeners and visitors.

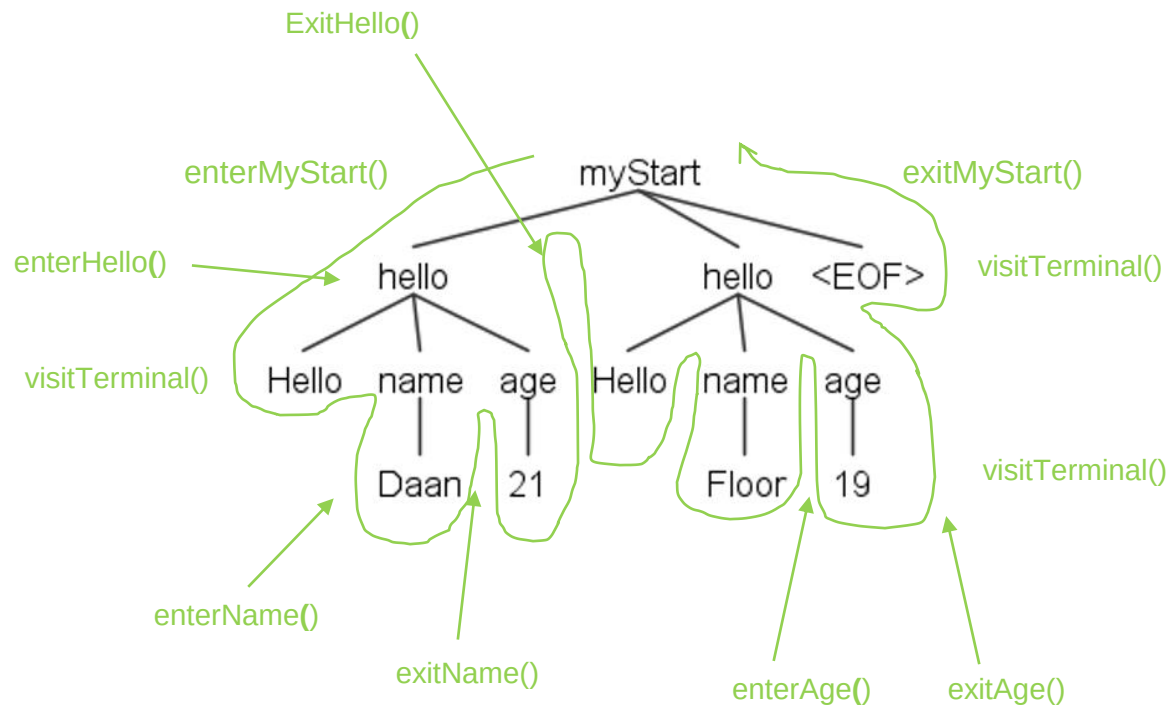

Related design patterns

- Iterator
 - Intent: **Iterator** is a behavioral design pattern that lets you traverse elements of a collection without exposing its underlying representation (list, stack, tree, etc.).
- Observer
 - Intent: **Observer** is a behavioral design pattern that lets you define a subscription mechanism to notify multiple objects about any events that happen to the object they're observing.

Traversing a Tree

Listener Methods

Note: Not all listener methods are mentioned

Implementing a Listener
